*HaaS means Hardware as a Service. WTI retains ownership of and is responsible for all maintenance of hardware under a HaaS agreement. All HaaS terms are 3 years. Other term lengths are available upon request. HaaS outside Orange County requires approval. Taxes are separate. Separate delivery and installation charges may apply to non-HaaS purchases.

WTI Professional Services

WTI Communications, Inc.

CALL TODAY! (800) 455-2000

sales@wticommunications.com

Professional Installation

- ✓ \$150 per PC
- ✓ Delivery included

Help Desk, Support & Managed IT Services

- ✓ \$10-\$75/month per device
- ✓ Month to month service agreement

Hardware as a Service

- ✓ Low monthly payment

Our on-site service gets your new PCs up and running, fast! A certified professional delivers the new PCs to your location, configures user accounts, cleans up the mess, and recycles the empty boxes. Flat fee of \$150 per PC, anywhere in Orange County.

Included in HaaS pricing!

In the event of errors, complications, or any number of IT related snags, our experts step in to solve the problem. All for one low, predictable monthly rate.

Already have an IT department? No problem! We support your existing IT department by filling in gaps as needed and helping with large one-time projects, such as a move. Our California-based team is professionally trained and fully certified. Starting at just \$10 a month per device!

WTI's HaaS solution outfits your business with the hardware you need, and provides ongoing service for as long as the hardware remains at your business. There's no big upfront investment, so getting started is easy. Add a support plan to get the most from your hardware.

Windows XP support has ended.

25% of Windows PCs in the workplace are running XP.

After 12 years, support for Windows XP ended April 8, 2014. There will be no more security updates or technical support for the Windows XP operating system.

Though the OS is over 12 years old, and Windows XP computers haven't been shipped since 2010, Windows XP is still the second most popular operating system around the globe, with 27% of the market.

What does it mean for businesses?

Weak Security

Computers running Windows XP are easy targets. Without critical Windows XP security updates, PCs are vulnerable to harmful viruses, spyware, and other malicious software that steals or damages your business data.

Anti-virus software can't provide full protection on Windows XP, so PCs running it should be considered unprotected.

Noncompliance

With XP's inevitable security vulnerabilities, businesses that are governed by regulatory obligations may find that they will no longer satisfy compliance requirements if they continue to run XP.

No Software and Hardware Support

Whether you're looking at wireless printers, Bluetooth keyboards, or 4K monitors, it will be challenging (if not impossible) to find drivers and support to make new technologies work with Windows XP.

Many software vendors will no longer support their products running on Windows XP. Likewise, hardware manufacturers won't support machines running Windows XP and drivers required for new hardware won't be available.

What can those running Windows XP do?

Your best bet is to buy new machines, since the latest operating systems aren't designed for installation on PCs running Windows Vista or XP. We're offering some great deals on new PCs with the latest hardware and software.

If you need help upgrading to Windows 7 or 8, call us. We evaluate your current needs and future expectations to make the best recommendation for you. Our California-based team is fully trained and certified!
